

Organisational and Environmental Management System Policy

Statement of Intent

WSM Plastics Limited (hereafter known as The Company) is committed to ensuring that its products and services are the best practically achievable and that its customers are delivered competitive, durable and high quality products. The Company recognises that its undertaking requires the use of material and energy resources to which it is committed to reducing in consumption. The Company is also committed to controlling, as far as possible, the waste that it produces by recycling and reusing as much waste as possible.

The Company's organisational and environmental management system will determine its control, objectification and continuous improvement of the following aspects:

- The risks and opportunities present and evolving in the undertaking;
- The quality and timeliness of its design service;
- The quality and timeliness of its product manufacture;
- The quality and timeliness of its supply line;
- The satisfaction of its customers, staff and trading associates and partners;
- The consumption of power and the production of waste
- The development of new markets and products.
- Endeavour to minimise emissions and pollution.
- Comply with ISO 9001 Standards.
- Comply with ISO 14001 Standards, environmental legislation and The Environmental and Waste Policy.

The Company has established the following measurable objectives to aid continuous improvement;

- Customer satisfaction
- Operational effectiveness and efficiency
- Reduced environmental impact

The Company delivers on its reputation for excellence, and will administer its compliance with the standards, through the following corporate entities:

- WSM Plastics Ltd

The Company will assess the risks and opportunities throughout its undertaking. Where shortfalls are identified, through operational control or audit, they will be addressed promptly and robustly. The Company will provide a framework for continual improvement of our products, services and systems to reduce its impact on the environment, reduce energy consumption per unit, increase customer satisfaction and develop business sustainability.

The Company understands that continual improvement happens best when everyone involved with the business is aware of this commitment, is trained to engage with it and empowered to support it.
